

The simplicity of medical imaging, everywhere.

Tricefy provides a centralized cloud-based patient sharing, collaboration, archiving, and reporting solution for medical imaging. Experience freedom and peace of mind with the ability to access medical images and data any time, any place, on any device. With a push of a button, streamline your patient sharing, EMR, reporting, and collaboration workflows. Every Tricefy feature is expertly designed to be compliant, efficient, and cost-effective. Installation is fast and remote, with no additional hardware required.

Streamline your imaging workflow

Patient sharing

Eliminate time-consuming printing, thermal or color prints, CD/DVDs or using thumb drives to share images and reports with patients. Ensure compliance by sharing select images, cine clips and reports with patients using secure links via email, text or the Tricefy Patient app directly from the medical imaging device or through your Tricefy™ account.

Adaptive Reporting

Adaptive Reporting templates allow you to customize reports to meet the need of your practice. Adaptive Reporting streamlines your documentation workflow by automatically transferring your measurements and data directly from your ultrasound system into a customized report. Your report will be stored and available to share alongside your images within the secure Tricefy cloud. Adaptive Reporting is EMR compatible and makes the need for printing and faxing obsolete.

Secure Archiving

Tricefy provides unlimited, secure, long-term cloud storage while giving you an easy-to-use tool for searching and reviewing studies. Studies can include images, volumes, cines, and reports which can all be integrated with your EMR. Experience unlimited, encrypted data storage, with anytime-anywhere access and a feature-rich image viewer. The Tricefy cloud service is designed with multiple layers of state of the art security across a scalable, secure infrastructure. Tricefy offers compliant primary and backup storage for disaster-proof, worry-free archiving.

EHR integration

Studies can be automatically sent to the patient chart as a PDF file and includes all pertinent patient information, high-resolution thumbnails, and unique links to access the study from any web browser. Check with Trice Imaging for a list of compatible EHR.

Collaboration

Tricefy's integrated consult feature enables you to quickly and easily collaborate with referring physicians, colleagues, and experts. A consult is created when a study is shared with another doctor or a group of doctors. This feature facilitates collaborations between physicians and multidisciplinary teams from across the world.
